

Retailer guide.

This is about us, but as a retailer it may interest you.

In 1999 we asked ourselves a question. Is there a way to make aquariums simpler to maintain and easier to own?

We started to think about aquarium design in new ways. We thought about what fish need and we thought about the home aquarist. We really wanted to get the fundamentals right.

Then we set out to make the best quality products we know how. We wanted them to be so good, that customers would want to tell their friends about them.

We believe that it all starts with a great product. We believe in a thing called quality and we believe that difficult is worth the effort.

Today, there are over a million biOrb owners worldwide.

Water oxygenation, better by design

Fish keeping folklore dictates that you must have a large surface area of water in order to have oxygen exchange. We're pretty used to people jumping to conclusions, but the truth is that the oxygenation in a biOrb is second to none.

But don't take our word for it

We asked the University of Veterinary Medicine in Hannover to do an independent test against a standard rectangular aquarium and this is what they said, word for word.

"The oxygen concentrations in the biOrb aquarium were higher than in the rectangular aquarium. The oxygen concentrations in the biOrb aquarium were probably higher due to the vigorous aeration and turbulence. This keeps the gases in equilibrium with the air above the water surface. This caused the gases to be well distributed and redundant gases to be easily expelled."

University of Veterinary Medicine in Hannover.

Made from acrylic, not glass. Here's why...

Because acrylic is 10 times stronger than glass. In fact acrylic just over one inch thick (32mm), is bullet resistant.

It's also noticeably clearer

Acrylic has a transparency rate of 93% making it the clearest material known. Glass only allows 70% of light to pass through and thick glass always has a green tint.

Customers have told us that...

"it's like watching your fish in high definition"

A simple filtration system that works from the bottom up

Fish waste sinks

All biOrbs have a filter at the bottom of the aquarium. It's where solid waste naturally settles. Put simply, the filter works where there is most to filter.

We've even made it easy to replace. It takes seconds to do and you only need to change it every four to six weeks.

Mother Nature works for us

This is ceramic media. You'll find it in every biOrb. It's made by firing clay to 1500°C. It is incredibly porous and totally inert.

Its unique shape allows the water to circulate through and around it.

Why's that important?

Amazingly, the ceramic media provides a surface area the size of a football pitch for good bacteria to live on. This bacteria is too small to be seen with the naked eye and feeds on fish waste. This is Mother Nature's natural biological filtration.

LIFE

Ordering biOrb LIFE

biOrb LIFE 60 litre | **P6000**

About the LIFE range

biOrb LIFE is the contemporary statement in fish keeping. If your customer is looking for a high performance aquarium that looks like nothing else, then recommend a biOrb LIFE.

All LIFE aquariums come complete with a built-in Intelligent LED Light featuring an automatic 24 hour natural light cycle, including blue moonlight.

Like all biOrbs, the LIFE range is backed by a 12 month guarantee.

Colours

All sizes are available in White, Black and Red.

The automatic blue moonlight.

FLOW

Provides a massive surface area for biological filtration.
Suitable for any aquarium.

S0150

The safest, most economical aquarium heater.

What's wrong with conventional aquarium heaters?

Look closely at a conventional aquarium heater and you'll notice that there is only a glass tube and a rubber seal between you and a mains voltage cable. If either of these fail, you have a mains voltage cable submerged in a body of water. At this point you're relying on your household trip switch to save you from serious electric shock.

Luckily reported accidents are few, but one accident is surely one too many.

There had to be a safer way.

Using solid state heating similar to the kind you find in hair straighteners we developed an aquarium heater that runs off just 12 volts.

We also built in some clever electronics. It checks the water temperature 3,000 times a minute and only puts in just enough heat to keep the aquarium at the right temperature.

And it's tough too.

Made from durable polycarbonate it's strong enough to hide within your pebbles or décor and you certainly wouldn't do that with a glass heater.

Want to know more?

Call or email us today. Our contact details are on the back of this guide.

Plug and play, everything.

The Powerpod powers your Air pump, light and the Intelligent Heater.

Intelligent Heater with Powerpod H1000

Your silent salesman.

Like you, we know that a dry set up doesn't inspire anyone to make a purchase. It's really no surprise that aquariums look best when they're running. That's why we are happy to offer you a display aquarium for your store.

Don't worry, we appreciate you're too busy to look after another aquarium. So we ask that you don't put fish in it and we'll provide an additive to prevent any algae growth.

Interested in having a display aquarium?
Call or email us today. Our contact details are on the back of this guide.

Display plinth | M003

Investing in your next customer.

All good retailers know that customers buy when they're ready to buy, not when you're ready to sell.

We don't do your job, but there can be nothing worse than an interested customer walking out - without a reason to come back.

That's why we'll provide you with as many sales brochures as you'd like. Scribble your prices on them, give them your name and number. Give them a reason to come back.

Need some brochures?

Call or email us today. Our contact details are on the back of this guide.

Brochures | **B1014**

biOrb A5 Leaflet Stand White | **B1023**

How about lots of products in a small space.

If you've got room for the box on the left, then you've got room for the merchandiser on the right. Seriously, it's the same footprint.

It holds the display tank on the top and has a tamper-proof area for electrics.

On the front you'll see what we call "recipe cards". They're free postcards full of ideas on how to decorate your biOrb with an easy to follow shopping list on the back.

The great thing is you're only looking at half the stock - it's double sided.

Got room for a merchandiser?

Call or email us today. Our contact details are on the back of this guide.

For refill cards

Call or email us today. Our contact details are on the back of this guide.

What's next?

It's a great question. We like it.

We make a lot of prototypes, new designs are our lifeblood. Every once in a while we make one that's better than the rest. Then we set about nurturing this design and getting it to the high street.

So, there'll be new products. They'll continue to be innovative and we won't ship them unless we love them.

How to order biOrb products for your store.

Order by phone direct from Reef One

01603 710339

Order by fax direct from Reef One
